

# Priorities for the General Assembly and Governor

How much of a priority should these topics be for Maryland's General Assembly and the Governor? [2015 data]

*Not a priority, low, medium, high very high*

## About the maps

These maps represent interpolated data from Maryland surveys conducted in 2015 by George Mason University and its partners. The program used to develop the maps, ArcGIS, estimates trends between survey data points, allowing it to generate a layer for the entire state. The base sample size is 1,547. In order to capture regional differences, the survey sampling was conducted at the regional level.

*Thank you to Prof. Paul Delamater, Geography and Geoinformation Science, George Mason University, for his assistance in creating the maps.*
